

The Genesis Servo-Sub™ 4/8 is an exceptional subwoofer with four ultra-fast 8-inch ribbed aluminum-cone woofers and an integral 500W servo-controlled amplifier.

The hallmarks of the S4/8 are speed, delicacy, and articulation. Yet, it is capable of sonically portraying the most earth-shaking events in a home theater application. In music applications, the S4/8 is an excellent match to planar and electrostatic loudspeakers, adding the vital bass foundation to bass-shy models from other manufacturers.

When used to complement the Genesis 6.1c Center Channel, or any other center channel speaker for multi-channel movie applications, it adds “body” to the voice channel. Its unique form factor means that it can also be used as a pedestal on which the owner can place a center channel loudspeaker.

A built-in 500W servo-controlled Class-D discrete MOSFET bass amplifier provides extraordinary control, reducing distortion woofer to less than 1% at its rated output.

The S4/8 features a separate input with Genesis’ LFE-Blend™ technology that seamlessly mixes the home theater LFE input into the bass signal of the high-level speaker input or pre-amp level input. This allows the S4/8 to be used both as a subwoofer to augment a satellite speaker, **and** as a home theater LFE subwoofer at the same time. A buffered daisy-chain LFE output allows a link to other subwoofers via balanced XLR, and/or single-ended RCA connections.

Genesis Advanced Technologies ServoSub™ 4/8

Frequency Response	20Hz to 140Hz, ±3 dB
Amplifier Power Rating	500 watts RMS
LF Transducers	Four 8" ribbed aluminum cone
Controls	Low Pass, Bass gain, LFE gain, Phase Invert
Inputs	High-level with 5-way binding posts Preamp level unbalanced RCA and balanced XLR LFE unbalanced RCA and balanced XLR
Input Impedance	33K ohms
Outputs	LFE daisy-chain unbalanced RCA and balanced XLR
Dimensions	H 21 1/2" x W 22 1/2" x D 11 1/2" H 550mm x W 570mm x D 295mm
Weight	83.5 lbs (38 kg)
Finish Options	Maple Rosewood High Gloss Automotive
